

ClearDox Spectrum

Turn manual processes into a competitive advantage

Manually entering data into digital systems is not only inefficient and error prone — it prevents you from accessing the accurate, timely data required to make critical decisions.

With the ClearDox® Spectrum intelligent document processing (IDP) solution, your business can work faster and smarter. You can access the data you need, right when you need it, to make the decisions that will put you ahead of the competition.

Transform any document into actionable data.

Spectrum quickly and securely turns any kind of document — digital or handwritten — into actionable data. Data is automatically classified, extracted and reconciled, then integrated into downstream systems.

The platform automates and simplifies document processing so your staff can focus less on data entry and more on strategic initiatives that will help your business grow. Spectrum is:

- **Flexible:** Host Spectrum in our cloud, which delivers exceptional performance with ISO/IEC 27001 certification. You can also host it on premises, or in your private cloud on Amazon Web Services or Microsoft Azure.
- **Secure:** Both SAML SSO authentication and two-factor authentication are supported. The latest transport layer security technology encrypts all data transmissions between your network and our servers. Application-layer firewalls provide real-time protection against zero-day threats and DDoS attacks.
- **Configurable:** While Spectrum is an out-of-the-box solution, it's fully configurable to meet your unique needs, and includes extensive user access and authentication controls.
- **Fully managed:** We manage upgrades, backups, maintenance and technical support so you don't have to.

Key benefits

- Make smarter, data-driven business decisions.
- Free up resources for strategic initiatives that grow your business.
- Eliminate manual errors and reduce operational risk.
- Make critical business processes faster and more efficient.
- Reduce costs associated with manual processes.

How it works: Our 5-step process

Step 1: Classify

Spectrum automatically classifies your documents by type and identifies the original sender using artificial intelligence (AI), machine learning (ML) and natural language processing (NLP). To ensure the highest level of accuracy, users can easily “train” the AI/ML classification process.

Step 2: Extract

Spectrum automatically extracts data from your documents using multiple optical character recognition (OCR) engines and a mix of AI, ML and NLP technologies.

Step 3: Enrich

The platform can enhance the extracted data with data from other systems so it becomes more useful and provides better insights.

Step 4: Reconcile

Your data is automatically validated against data from other systems. Spectrum flags duplicate documents and discrepancies, and provides a collaboration feature that allows staff to quickly resolve issues by communicating with team members and vendors right from the user interface.

Step 5: Integrate

The platform sends the fully cleansed and validated data to your downstream systems via FTP, messaging or email at the frequency of your choice. Data can also be accessed using our API.

Trusted and proven.

ClearDox Spectrum is easy to get up and running, and even easier to use. That’s why it’s processed hundreds of thousands of documents since 2018 for leading companies including Gulf Oil and Freepoint Commodities.

A partner you can depend on.

While ClearDox Spectrum is an out-of-the-box solution, our approach is anything but: We know one size does not fit all. That’s why we spend time getting to know your business, inside and out. We take your challenges on as our own, and collaborate with you to solve the problems holding you back.
